## PROFESSIONAL SUMMARY

Java Backend Developer and Quality Specialist with hands-on experience building scalable, event-driven microservices for a banking fraud-detection platform using **Java, Spring Boot, Docker, and Kafka**. Skilled in **real-time transaction processing**, rule-based fraud alerting, test automation with Selenium and Cucumber BDD, and **AI-assisted / agentic development**.

## EXPERIENCE

### Tata Consultancy Services (TCS)

Nov 2025 – Present

*Java Backend Developer & Quality Specialist*

*Bangalore, India*

- Working as a cross-functional Java backend developer and quality specialist on a **Bank of America (BOA)** fraud-detection platform, building 5+ real-time transaction-monitoring microservices using Java, Spring Boot, Docker, and Kafka.
- Developed backend transaction-flow logic for credit card, debit card, and gift card transactions, applying rule-based fraud detection using the Brainiac rules engine across 10+ configurable rules with real-time alerts to merchants and users.
- Designed event-driven, asynchronous **Kafka** pipelines for transaction processing, improving throughput by 20% and decoupling service dependencies.
- Automated transaction and fraud-alert flows using **Selenium and Cucumber BDD**, covering 150+ end-to-end test scenarios.
- Leveraged GitHub Copilot for **AI-assisted development**, applying prompt-based **agentic AI engineering** to build automation workflows that reduced manual coding effort by 15% per business requirement.
- Built full-stack applications using **Java, Spring Boot, Angular, and TypeScript**, and optimized SQL/PL-SQL queries using indexing and pagination, reducing **API response times by 25%**.

## TECHNICAL SKILLS

**Languages:** Java, Python, JavaScript, SQL

**Backend & Messaging:** Spring Boot, Spring Security, REST APIs, JWT, JPA, Apache Kafka, Node.js, Express

**Frontend:** React, Angular, HTML5, CSS3, Bootstrap

**Databases & DevOps:** MySQL, MongoDB, PL/SQL, Docker, Git, Maven, Linux

**Testing:** Selenium, Cucumber (BDD), Playwright

**AI Tools:** GitHub Copilot, Claude, OpenCode, Cursor, Windsurf, Google Antigravity, Lovable, Google Stitch

**Domain & Methodologies:** Fraud Detection, Transaction Processing, Rule-Based Alerting Systems, Agile, Scrum

## PROJECTS

### Banking Portal | Java, Spring Boot, Spring Security, JWT, MySQL

GitHub

- Built a secure banking application with **JWT authentication, BCrypt password hashing**, and role-based access control (RBAC) across 3+ user roles for multi-user account management.
- Implemented ACID-compliant transaction processing with concurrency control, ensuring 100% data consistency; improved backend performance by 30% using indexed **SQL queries and pagination**.

### Smart Airport Ride Pooling Backend | Java 17, Spring Boot, H2, Maven, Swagger Github

GitHub

- Developed a Spring Boot ride-pooling backend using a **greedy  $O(N \cdot K)$  ride-matching algorithm** based on seat/luggage capacity and detour tolerance, with dynamic fare calculation and a 30% default pooling discount
- Ensured **concurrency-safe** seat allocation using **@Transactional** and optimistic locking with **@Version**, with cancellation handling to prevent overbooking and release cab capacity.

### Myntra Product Scraper & Automation Framework | Java, Playwright, Cucumber

GitHub

- Built a Java-based web scraping and automation framework to extract and validate 200+ product records in under 2 minutes for data-quality testing.
- Increased test automation coverage by 40% by implementing behavior-driven test scenarios with Cucumber BDD and Playwright.

## EDUCATION

### KIIT University

2021 – 2025

*Bachelor of Technology in Computer Science and Engineering*

*Bhubaneswar, India*

## ACHIEVEMENTS

- Ranked **457 / 5000+** in GeeksforGeeks Job-a-Thon 33; achieved **5-Star** proficiency rating in Java on HackerRank.
- LeetCode peak rating **1592**; CodeChef peak rating **1193**; Qualified for HackOn with Amazon – Season 4.
